

Practical 1

Challenges Faced

- Understanding the purpose and syntax of different Linux commands.
- Remembering the difference between **absolute** and **relative** file paths.
- Creating and managing multiple directories and files correctly.
- Searching files and specific text using `find` and `grep` commands.
- Copying, moving, renaming, and deleting files without affecting other data.
- Understanding Linux file permissions and their role in data security.
- Creating backups and verifying that backup files were copied successfully.
- Monitoring system information and CPU usage using Linux commands.
- Avoiding command syntax errors due to incorrect file or directory names.
- Organizing project files in a proper directory structure for easy management.
